

# Project Plan

---

Project Name: Comprehensive Food GUI

Group Number: 023

Team Members

Student No.	Full Name	GitHub Username	Contribution (sum to 100%)
s5398289	William-Joseph Simons	William-JosephSimons	Equal
s5265839	Ben Lange	s5265839-Griffith	Equal
s5264208	Braith Lee	braithicus	Equal

Brief Description of Contribution

Please Describe what you have accomplished in this group project.

- s5398289, William-Joseph Simons
  - Project Plan Document, System Vision, Structural Design, Implement Food Search Feature, Implement Nutrition Breakdown Feature, Implement Nutrition Range Filter Feature, Implement Nutrition Level Filter Feature, Unit Testing and Report, Coverage Testing and Report
- s5265839, Ben Lange
  - Additional feature creator, Software Design Document, Food Wars Feature, Project Plan updates, Software Design Document updates & GUI, Executive Summary
- s5264208, Braith Lee
  - Stakeholder Classifications and Additions, Requirements Section, Wireframes, General Fixes, Project Plan updates, GUI: majority of template\_frame and run\_template

# Table of Contents

---

- Project Plan
  - 1. Project Overview
    - 1.1 Project Objectives
    - 1.2 Project Stakeholders
    - 1.3 Project Scope
  - 2. Work Breakdown Structure
  - 3. Activity Definition Estimation
  - 4. Gantt Chart

# 1. Project Overview

## 1.1 Project Objectives

- Provide a tool that allows users to assess the nutritional value of different foods.
- Provide a tool that allows the consumer to search foods by their name.
- Provide a tool that allows users to filter the nutritional data according to particular ranges and levels of nutrients
- Provide a graphical user interface to allow for the data to be interacted with.
- Allow for a foods nutritional value to be shown visually, with tools such as pie charts and bar graphs.
- Allow for a visual comparison between 5 chosen foods with pie charts and bar graphs based on a chosen shared nutritional value

## 1.2 Project Stakeholders

### Project Manager (Internal Executive)

- **Description:** In charge of managing the project in its entirety and acting as the communicator between all stakeholders, making sure its stays within and meets the requirements of the scope.
- **Role:** Acts as the main point for communication. Coordinates and integrates the processes of: Initiating, Planning, Executing, Monitoring and Controlling, and Closing. And facilitates decisions made within the core knowledge areas such as: Integration, Scope, Time, Cost, Quality, Human Resources, Communication, Risk, and Procurement. This is done through delegation, or personally by the project manager.

### Data Analysts (Internal Operational)

- **Description:** Professionals in the scope of analysing and interpreting data to gain insights and meaning.
- **Role:** Create algorithms to evaluate the Nutritional\_Food\_Database.csv, and identify metrics and trends in the data that allow for different visual representations. While also removing any anomalies from the dataset, ensuring high quality data. They also use their findings to effectively communicate complex insights to other stakeholders.

### Software Developers (Internal Operational)

- **Description:** People who are skilled in designing, implementing, and testing software applications.
- **Role:** Implement and document the tools and analytical insights from the data analysts, while ensuring they are of high quality and thoroughly tested. This means ensuring that these tools meet the necessary requirements while being free of bugs, and documenting the process for other stakeholders.

### Nutritionists and Dietitians (External Operational)

- **Description:** Professionals that are involved with advising people on their health related goals and their nutritional intake.
- **Role:** They will use the application to search for specific nutrients and analyse the data to come to conclusions on what the patient should do.

### Educational Institutions (External Operational)

- **Description:** Institutions that involve educating the population such as schools and universities. Specifically institutions that teach topics involved with vitamins and nutrients such as health science.
- **Role:** Institutions will use the application as a resource to teach students about nutrition, and use the visualisation tool as way to better engage the students.

### Health Conscious Individuals (External Operational)

- **Description:** A subset of the general public that is conscious of their health and is interested in maintaining a healthy lifestyle and diet.
- **Role:** These people will use the application to search for nutritional information on the food they are eating to make more informed choices.

### Researchers (External Operational)

- **Description:** People within academic institutions that study dietary and nutritional information; doing projects and conducting tests, searching for patterns and how different nutrients impact human health.
- **Role:** They will use the application for easily searching through nutritional data and for its visualisation tools, to aid research projects.

### Food Manufacturers (External Operational)

- **Description:** Companies that are involved in the selling, marketing, or producing food.
- **Role:** Companies will use the application to become more aware of the relative sizes of different nutrients in their products and to better market the product to consumers based on its content.

### Regulatory Bodies (External Executive)

- **Description:** Agencies that ensure compliance with legal and regulatory standards.
- **Role:** They ensure that the software adheres to national law in terms of nutrition by enforcing regulations and guidelines.

### Institutional Oversight Committees (External Executive)

- **Description:** Universities and institutions that ensure the project meets ethical standards, and provide oversight.
- **Role:** They determine what aspects of the project are approved, the project's funding allocation, and enforce adherence to policies.

## 1.3 Project Scope

### Inclusions

#### Graphical User Interface

An interface that allows users to easily and graphically navigate the Nutritional\_Food\_Database.csv. It includes:

- A food item search feature.
- Tools for visualisation, such as bar graphs and pie charts.

- Menus to perform different actions on the data.

### **Food Search Feature**

A search feature that allows users to search for food items by name and see all its available nutritional data. It includes:

- A search bar where you can enter the name of a food.
- A display that contains the nutritional information available for that food, along with visualisations of the data.
- An autocomplete feature that helps in finding the desired food.

### **Nutrition Breakdown Feature**

A feature that allows the user to see the nutritional breakdown of the food item they selected through pie charts and bar graphs.

It includes:

- Pie charts and bar graphs.
- An interactive component that allows the user to flip between the bar graphs and pie charts.

### **Nutrition Range Filter Feature**

Allows users to select a nutrient and gives them the ability to input maximum and minimum values, and displays to them a list of foods that fall within that range.

It includes:

- A range menu for choosing between different nutrients.
- Fields to enter the maximum and minimum values.
- A display afterwards that contains the list of foods.

### **Nutrition Level Filter Feature**

Allows users to filter foods by their nutritional content levels: low, mid, and high. It includes:

- Low: Less than 33% of the highest value.
- Mid: Between 33% and 66% of the highest value.
- High: Greater than 66% of the highest value.
- A filter menu for choosing the nutrient.
- A field for choosing low, mid, or high.
- A display afterwards that will contain the list of foods.

### **Food Wars**

Allow users to compare up to 5 different foods against a chosen nutrient and allow them to visually compare the different foods in a bar graph. It Includes:

- A button to access the feature.
- Search bars for the foods and for the nutrient.

- Bar graphs.

### **Documentation**

Documentation of the software that describes how it works, and how its meant to be used. It includes:

- Describes how the code will operate (function definitions, data structures, etc.)
- Descriptions of what the system will do.
- Descriptions on how the user is required to interact with the software.

### **Quality Assurance**

Testing and validating the software to make sure it fulfils the scope to a high standard and is free of bugs. It includes:

- Bug tracking and fixing.
- Thorough testing of the code.

### **Exclusions**

#### **Real-Time Data Integration**

Using a dynamic data source that is up to date. It excludes:

- Real time data.
- Data that is dynamic and updates.

#### **Multi-Language Support**

Support for languages other than english within the program. It excludes:

- A menu for switching languages.
- A translation tool for the GUI.

#### **User Authentication and Security Features**

Tools that involve authenticating the user and other security. It excludes:

- Multi-factor authentication.
- Encryption of the data.
- A login screen.

#### **Customisation Options**

A feature that allows the user to customise the appearance of the GUI. It excludes:

- Different themes.
- Extensions.

#### **Advanced Analytics**

Features that include things such as advanced analytics beyond basic filtering, ranges, and charts. It excludes:

- Machine learning.
- Data mining.

## **Scope Management**

### **Regular Reviews**

Rounds of regular reviewing of everyone's work to ensure that it stays within the scope. It includes:

- Regular weekly meetings.
- Reports on progress and changes made.
- Communication around the necessary future changes to be made to the project.

## 2. Work Breakdown Structure

3. Activity Definition Estimation

Activity #No	Activity Name	Brief Description	Duration (Days)	Responsible Team Members
1.1	Define Project Objectives	Establish objectives or goals that the project aims to achieve.	1	William-Joseph

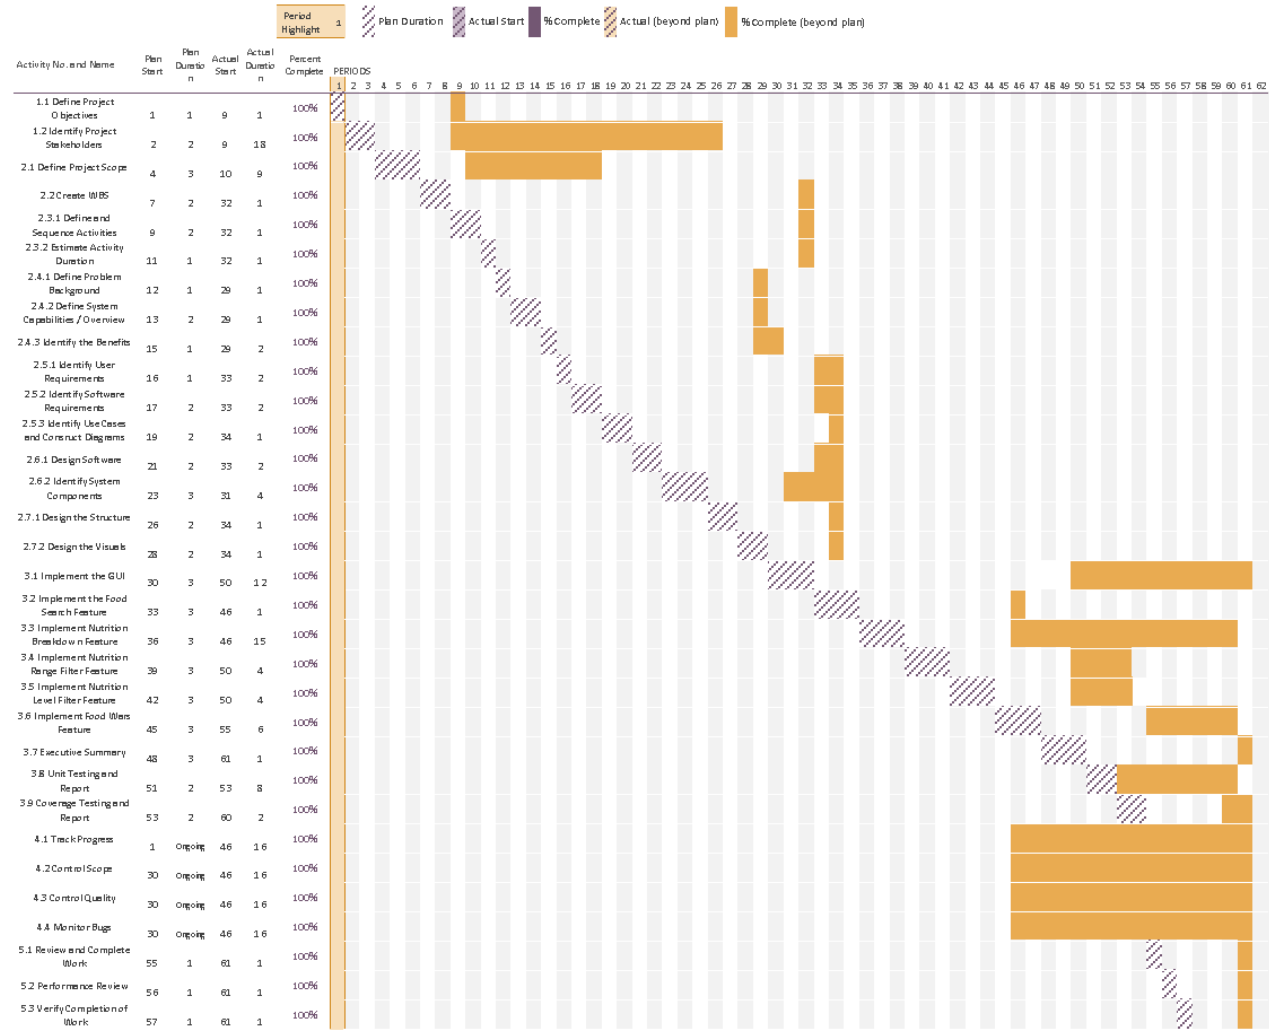

Activity #No	Activity Name	Brief Description	Duration (Days)	Responsible Team Members
1.2	Identify Project Stakeholders	Identify all key stakeholders involved in the project, including internal teams and potential end-users.	2	William-Joseph
2.1	Define Project Scope	Define and manage what is included or excluded in the project and product.	3	William-Joseph
2.2	Create WBS	A Work Breakdown Structure for the entire project. The WBS should be presented as a hierarchical diagram. All project activities are considered and included in the WBS.	2	William-Joseph
2.3.1	Define and Sequence Activities	Define the activities required for the project based on the WBS, and assign responsibilities to team members. Each activity should be numbered.	2	William-Joseph
2.3.2	Estimate Activity Duration	Provide estimated durations for each activity and use that to create a Gantt chart.	1	William-Joseph
2.4.1	Define Problem Background	Identify the problem, dataset, data input/output, and the target users	1	William-Joseph
2.4.2	Define System Capabilities / Overview	Define what the system will do and describe the key features and functionalities of the system.	2	William-Joseph
2.4.3	Identify the Benefits	Identify how the system will provide value and benefit the stakeholders.	1	William-Joseph
2.5.1	Identify User Requirements	Detail how users are expected to interact with or use the program. What functionalities must the system provide from the end-user perspective?	1	Braith Lee
2.5.2	Identify Software Requirements	Define the functionality the software will provide. This section should list requirements formally.	2	Braith Lee
2.5.3	Identify Use Cases and Construct Diagrams	Include at least 5 use cases, each corresponding to a specific function. Provide a system-level Use Case Diagram illustrating all required features.	2	Braith Lee
2.6.1	Design Software	Include a flowchart that illustrates how the software will operate.	2	Ben Lange

Activity #No	Activity Name	Brief Description	Duration (Days)	Responsible Team Members
2.6.2	Identify System Components	List all key functions within the software. List all data structures or sources used in the software. Provide pseudocode or flowcharts for all the functions listed that operate on the data structures.	3	Ben Lange
2.7.1	Design the Structure	Present a structural design, a hierarchy chart, showing the overall interface's structure.	2	William-Joseph
2.7.2	Design the Visuals	Include all wireframes or mock-ups of the interface. Provide a discussion, explanation, and justification for the design choices.	2	Braith Lee
3.1	Implement the GUI	Implement the graphical user interface. This includes using wxFormBuilder to develop the layout.	12	Braith and Ben
3.2	Implement Food Search Feature	Code all the functions that enable the user to search for foods by name. Including the event that calls the nutrition breakdown feature.	1	William-Joseph
3.3	Implement Nutrition Breakdown Feature	Code all the functions that enable the user to see pie charts and bar graphs that display the nutritional breakdown of the selected food.	15	William-Joseph
3.4	Implement Nutrition Range Filter Feature	Code all the functions that enable the user to see a list of food filtered by a minimum and maximum range of a specific nutrient.	4	William-Joseph
3.5	Implement Nutrition Level Filter Feature	Code all the functions that enable the user to see a list of foods filtered by low, mid, or high levels of a selected nutrient.	4	William-Joseph
3.6	Implement Food Wars Feature	Code all the functions that allow the user to compare up to 5 different foods against a chosen nutrient and the chart to compare the different foods.	6	Ben Lange
3.7	Executive Summary	Add step by step instructions on how to use each feature and any additional instructions.	1	Braith Lee

Activity #No	Activity Name	Brief Description	Duration (Days)	Responsible Team Members
3.8	Unit Testing and Report	Perform unit testing on the code to ensure there are no bugs and that the code meets the scope. Also recording everything in the testing document.	8	William-Joseph
3.9	Coverage Testing and Report	Perform coverage testing on the code to ensure the tests cover all the code. Also recording everything in the testing document.	2	William-Joseph
4.1	Track Progress	Monitor the progress of the project to ensure it keeps pace with timelines and milestones.	Ongoing	All
4.2	Control Scope	Ensure the progress stays within the scope by managing changes made.	Ongoing	All
4.3	Control Quality	Ensure the application meets high standards by conducting reviews against the rubric.	Ongoing	All
4.4	Monitor Bugs	Track known bugs that are found during testing. Manage the bugs to ensure stability of the application.	Ongoing	All
5.1	Review and Complete Work	Review the completed work to ensure it meets the objectives that were set.	1	All
5.2	Performance Review	Ensure that the completed work meets the required standards for the rubric.	1	All
5.3	Verify Completion of Work	Final review with the entire team to ensure everyone agrees on the application standard, and that it is ready to send.	1	All

4. Gantt Chart

Comprehensive Food GUI

Gantt Chart is now fully filled out
